Subject: Request for Appointment to Discuss Medical-Based Major Project and Seek Guidance

Respected Sir/Madam,

Greetings.

I am Ashwini Vishal Hebbali, a 6th semester student pursuing Bachelor of Engineering in Computer Science and Engineering (Artificial Intelligence) at Maharaja Institute of Technology, Mysore. As part of our academic curriculum, my team and I are required to undertake a major project.

Under the guidance of our faculty mentor, we are keen on developing a medical-based project that integrates Artificial Intelligence to address real-world healthcare challenges. Considering the esteemed reputation of AIISH in research and clinical services related to speech, hearing, and allied sciences, we believe your valuable expertise and guidance would greatly help us in identifying a meaningful and practical problem statement.

We humbly request an opportunity to visit your institute and meet the concerned faculty/research team at your convenience to:

- Obtain a relevant medical problem statement suitable for an AI-based solution
- Understand practical challenges in the domain
- Seek guidance and approval for proceeding with the project

We assure you that this project will be undertaken strictly for academic purposes, and we will adhere to all ethical and institutional guidelines suggested by your esteemed institute.

We kindly request you to grant us an appointment at a date and time convenient to you. We would be grateful for your support and mentorship.

Thanking you, in anticipation.

Yours sincerely,
Ashwini Vishal Hebbali
On behalf of the Project Team
Maharaja Institute of Technology Mysore
